

Class Evaluation for Nick Eubank Computational Methods Boot Camp

August 13, 2018

What is something that went well in class and contributed to your learning?

Everything about R & the exercises was super helpful. Especially the parsons e.g.'s.

What, if anything, could have been improved to help you learn better?

More practice & maybe a little more intro to coding vernacular for those of us who are tech impaired.

Is there anything else you'd like to share about the class?

Thank You!

What is something that went well in class and contributed to your learning?

Nick was very enthusiastic ^{Friendly} throughout the R course. He clearly explained the basics of R and addressed the questions raised by students. He introduced very useful materials so that I can go over and continue studying R. I love his class!

What, if anything, could have been improved to help you learn better?

It'll be better if we had a syllabus before class started!

I was curious what I would learn ^{more detailed} in class?

Is there anything else you'd like to share about the class?

Nick ~~was~~ came to class early before the actual class began and he helped students who had difficulties with homeworks ~~and~~. He even stayed after class to help out students!

What is something that went well in class and contributed to your learning?

The in-class exercises were incredibly helpful. Nick was exactly the right kind of combination of hands-off and instructional. He really facilitated my learning.

What, if anything, could have been improved to help you learn better? More in-class examples and fewer online tutorials. Homework is fine, but a significant amount of time was lost from having to convert the material online into our in-class language.

Is there anything else you'd like to share about the class?

Nick was fun and excellent and I wish this section of math camp was longer!

What is something that went well in class and contributed to your learning?

The short comp camp is inclusive in terms of contents. Students take turns to practice, help each other, everyone improved himself.

What, if anything, could have been improved to help you learn better?

The time length needs to be increased because it is challenging to digest some ~~of~~ advanced contents overnight.
in class end

Is there anything else you'd like to share about the class?

It is very helpful generally, I learned a lot of things. ~~It~~ even I already know something about R.

What is something that went well in class and contributed to your learning?

It was basically my first time engaging with R so I'd say every bit of the class was helpful! Nick was very helpful in pointing out what went wrong in my codes and offered useful feedbacks on how to improve.

What, if anything, could have been improved to help you learn better?

Class materials such as the solutions to in-class exercises ^{providing} after each class for informational purposes.

Is there anything else you'd like to share about the class?

Thank you for teaching! Just wish we had more time.
